
Contents

1. A Simple Market Model	1
Case 1	1
1.1 Basic Notions and Assumptions	1
1.2 No-Arbitrage Principle	5
1.3 One-Step Binomial Model	7
1.4 Risk and Return	10
1.5 Forward Contracts	11
1.6 Call and Put Options	14
1.7 Foreign Exchange	19
1.8 Managing Risk with Options	21
Case 1: Discussion	23
2. Risk-Free Assets	25
Case 2	25
2.1 Time Value of Money	25
2.1.1 Simple Interest	26
2.1.2 Periodic Compounding	29
2.1.3 Streams of Payments	33
2.1.4 Continuous Compounding	36
2.1.5 How to Compare Compounding Methods	39
2.2 Money Market	43
2.2.1 Zero-Coupon Bonds	43
2.2.2 Coupon Bonds	45
2.2.3 Money Market Account	48
Case 2: Discussion	50

3. Portfolio Management	53
Case 3	53
3.1 Risk and Return	53
3.1.1 Expected Return	54
3.1.2 Standard Deviation as Risk Measure	55
3.2 Two Securities	57
3.2.1 Risk and Expected Return on a Portfolio	60
3.2.2 Feasible Set	64
3.3 Several Securities	71
3.3.1 Risk and Expected Return on a Portfolio	71
3.3.2 Minimum Variance Portfolio	72
3.3.3 Efficient Frontier	74
3.3.4 Market Portfolio	81
3.4 Capital Asset Pricing Model (CAPM)	84
Case 3: Discussion	89
4. Forward and Futures Contracts	91
Case 4	91
4.1 Forward Contracts	91
4.1.1 Underlying Asset	91
4.1.2 Forward Price	93
4.1.3 Value of Forward Contract	98
4.2 Futures	100
4.2.1 Pricing	100
4.2.2 Margins	102
4.2.3 Hedging with Futures	104
4.2.4 Index Futures	107
Case 4: Discussion	111
5. Options: General Properties	113
Case 5	113
5.1 Definitions	113
5.2 Put-Call Parity	116
5.3 Bounds on Option Prices	121
5.3.1 European Options	122
5.3.2 Calls on Non-Dividend-Paying Stock	123
5.3.3 American Options	124
5.4 Variables Determining Option Prices	126
5.4.1 European Options	126
5.4.2 American Options	131
5.5 Time Value of Options	135
Case 5: Discussion	139

6. Binomial Model	141
Case 6	141
6.1 Definition of the Model	141
6.1.1 Single Step	142
6.1.2 Two Steps	142
6.1.3 General Case	143
6.1.4 Flow of Information	144
6.1.5 Filtration	145
6.2 Option Pricing	146
6.2.1 Investment Strategies	146
6.2.2 Single Step	148
6.2.3 General Setting	151
6.2.4 Two Steps	153
6.2.5 Several Steps	155
6.2.6 Cox-Ross-Rubinstein Formula	156
6.3 American Claims	157
6.4 Martingale Property	161
6.5 Hedging	165
6.5.1 European Options	165
6.5.2 American Options	167
Case 6: Discussion	169
7. General Discrete Time Models	173
Case 7	173
7.1 Trinomial Tree Model	173
7.1.1 Pricing	174
7.1.2 Two Assets	176
7.2 General Model	178
7.2.1 Investment Strategies	179
7.2.2 The Principle of No Arbitrage	184
7.3 Fundamental Theorems of Asset Pricing	186
7.3.1 First Fundamental Theorem	186
7.3.2 Second Fundamental Theorem	189
7.4 Extended Models	192
Case 7: Discussion	194
8. Continuous Time Model	197
Case 8	197
8.1 Shortcomings of Discrete Models	197
8.2 Continuous Time Limit	198
8.2.1 Choice of N -Step Binomial Model	198
8.2.2 Wiener Process	201

8.2.3 Black-Scholes Model	202
8.3 Overview of Stochastic Calculus	204
8.3.1 Itô Formula	204
8.3.2 Expected Value of Itô Integral	206
8.3.3 Girsanov Theorem	207
8.4 Options in Black-Scholes Model	210
8.4.1 Replicating Strategy	210
8.4.2 Black-Scholes Equation	211
8.4.3 Black-Scholes Formula	214
8.5 Risk Management	217
8.5.1 Delta Hedging	217
8.5.2 Greek Parameters	222
8.5.3 Value-at-Risk	227
Case 8: Discussion	228
9. Interest Rates	233
Case 9	233
9.1 Tools	233
9.2 Maturity-Independent Yields	234
9.2.1 Investment in Single Bonds	235
9.2.2 Duration	241
9.2.3 Portfolios of Bonds	242
9.2.4 Dynamic Hedging	245
9.3 General Term Structure	247
9.3.1 Forward Rates	250
9.3.2 Money Market Account	253
9.4 Binomial Model of Stochastic Interest Rates	255
9.5 Arbitrage Pricing of Bonds	262
9.5.1 Risk-Neutral Probabilities	267
9.6 Interest Rate Derivative Securities	271
9.6.1 Options	272
9.6.2 Swaps	273
9.6.3 Caps and Floors	275
9.7 Final Remarks	277
Case 9: Discussion	279
10. Appendix	281
10.1 Calculus	281
10.1.1 Taylor formula	281
10.1.2 Lagrange Multipliers	282
10.2 Measure and Integral	283
10.3 Probability	284

10.4 Covariance Matrix	286
10.5 Regression Between Returns	288
11. Solutions	291
Bibliography	327
Glossary of Symbols	331
Index	333
